I. Purpose

I have been retained as an expert by counsel on behalf of Skechers U.S.A., Inc. and Skechers U.S.A., Inc. II (collectively “Skechers” or “Defendants”), in this litigation. I understand that Easy Spirit, LLC (“Easy Spirit” or “Plaintiff”) alleges acts of trademark infringement and false designation of origin under the Lanham Act; common law trademark infringement; common law trade dress infringement; and violation of Section 360-1 of the New York General Business Law.¹ In particular, Easy Spirit alleges that Skechers infringes Easy Spirit’s “TRAVELTIME” mark and Traveltime Trade Dress through its sales of certain Commute Time shoes.²

In the context of this litigation, I was asked to determine whether Skechers’ use of “Commute Time” as the name for certain of its shoes has caused a likelihood of confusion as to the source of Skechers’ Commute Time shoes.³ To address this question, I conducted a survey to determine whether customers and potential customers of women’s clog shoes⁴ confuse the Commute Time shoes as being put out by, sponsored or approved by, and/or having a business affiliation or connection to Easy Spirit.

I was also asked by counsel to determine whether Easy Spirit’s use of the alleged Traveltime Trade Dress has created a distinctiveness associated with that trade dress to stand for the shoes offered by Easy Spirit. In other words, I have been asked to investigate whether the Traveltime Trade Dress has attained secondary meaning in the marketplace. To address this question, I conducted a survey asking customers and potential customers of women’s clog shoes whether they associated the asserted trade dress from the Traveltime clog with one or more than one brand or company. This report describes my research methodology for conducting each of these surveys, my research findings, and the conclusions based on these findings.

¹ Complaint (“Complaint”), dated April 12, 2019, p. 1.

² Complaint, pp. 7-15.

³ It is my understanding that Easy Spirit is not aware of any instances of actual confusion in the marketplace. *See* Plaintiff Easy Spirit, LLC’s Amended Objections and Responses to Defendants Skechers U.S.A., Inc. and Skechers U.S.A., Inc. II’s Second Set of Interrogatories [Nos. 9-25], dated May 22, 2020, First Amended Response to Interrogatory No. 23.

⁴ Clog shoes are shoes that have no back or minimal constraint around the heel of the foot.

To form my opinions, I have considered the documents listed in Exhibit 3.0 or referenced in the text, footnotes, and attached exhibits of this report. I have also relied on my education, professional judgment and expertise gathered from many years of conducting and critically evaluating survey research. The following report summarizes my current opinions. The information in this report is based upon discovery to date and the information that is currently available. To the extent additional information is produced or relied upon, I may supplement this report, if warranted, based on this additional discovery.

II. Professional and Educational Background

I am a Managing Director with Berkeley Research Group, LLC (“BRG”). I am also leader of its Intellectual Property practice and co-leader of its Economics and Damages community. BRG is a leading global strategic advisory and expert consulting firm that provides independent advice, data analytics, valuation, authoritative studies, expert testimony, investigations, transaction advisory, restructuring services, and regulatory and dispute consulting to Fortune 500 corporations, financial institutions, government agencies, major law firms, and regulatory bodies around the world.

I have served as a consultant to a wide variety of clients on matters involving economic, financial, and survey and statistical analysis and modeling for the purpose of interpreting and projecting data and evaluating the impact of business decisions, transactions, and economic events. I have also served as an expert witness or consultant in a wide range of litigation matters, including patent, copyright, trademark infringement, trade secret misappropriation, and false advertising litigation. While the issues have varied from case to case, most included an analysis and evaluation of company-specific as well as industry-wide data for the purpose of determining the impact of allegedly wrongful actions and events on one or more companies.

I specialize in the application of survey research to the valuation of various forms of intellectual property, as well as, the perceptions and understanding consumers have of various forms of intellectual property. My experience includes serving as an expert witness or consulting with clients on survey research and survey methodological issues, including designing and conducting surveys for clients, evaluating the survey work done by others, and researching and recommending best practices.

Prior to entering economic and survey research consulting, I was a senior research associate at the Ohio State University Center for Survey Research. In that role, I designed numerous telephone, internet, and mail surveys for various clients. My responsibilities included everything from sample and questionnaire design to data collection methods and statistical analyses of survey data.

I also have written and presented papers and presentations dealing with various survey research topics and survey methodological issues. These presentations have included meetings of the American Statistical Association, the American Association of Public Opinion Research (“AAPOR”), the Midwest Association of Public Opinion Research, and the New York and Chicago Bar Associations, among others. Some of these papers were published in the American Statistical Association’s Proceedings of the Section on Survey Research Methods, Proceedings of the Section on Government Statistics and Section on Social Statistics, Public Opinion Quarterly, and various other publications.

In addition, I have served on the Sage Publications’ Editorial Board as an advisory board member for the compilation of the Encyclopedia of Survey Research Methods. I have acted as a referee in the review of a number of articles for publication in survey research journals. I also have served on various AAPOR-based task force committees convened to address, discuss, and put forth recommendations on various survey-related issues and on the Intellectual Property Owners Association’s Damages and Injunctions Committee. I also have published a chapter in the Litigation Services Handbook on Survey Research in Litigation.

I received Ph.D. and Master’s degrees in Economics from the Ohio State University. I received Bachelor of Arts degrees in Philosophy and Psychology from Cornell University and in Economics with a Math Minor from the University of Illinois-Chicago. I am a member of various professional organizations including the American Economic Association, the Intellectual Property Owners’ Association, the Licensing Executives Society, and the American Association for Public Opinion Research, among others.

My curriculum vitae, which includes the publications and presentations I have authored, is attached hereto as Exhibit 1. A list of the cases in which I have testified is attached hereto as Exhibit 2. BRG is being compensated on a rate times hours basis for the work my staff and I

perform. My current rate is \$675 per hour. BRG's compensation does not depend in any way on the outcome of this litigation.

III. Summary of Opinions

Based on my review of the survey results from the likelihood of confusion survey I conducted, I conclude that there is insufficient evidence to show that Skechers' use of Commute Time is likely to cause confusion in the marketplace. Specifically, I found that:

- Controlling for pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey, 0.0% of respondents believed Easy Spirit was the source of the Skechers' Commute Time shoes.⁵
- 0.0% of respondents believed Easy Spirit sponsored or approved Skechers' Commute Time shoes.⁶
- 0.0% of respondents believed there was a business affiliation or connection between Skechers' Commute Time shoes and Easy Spirit.⁷

These results demonstrate that customers and potential customers of Skechers' Commute Time shoes are not confused, mistaken, or deceived about Easy Spirit being the source or origin of Skechers' Commute Time shoes, about Easy Spirit sponsoring or approving Skechers' Commute Time shoes, or about Easy Spirit being affiliated with Skechers' Commute Time shoes.

Based on my review of the survey results from the secondary meaning survey I conducted, I conclude that there is insufficient evidence to show that Easy Spirit's alleged trade dress has secondary meaning in the marketplace. Specifically, I found that:

- Controlling for pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey, 1.0% of respondents associated the alleged Traveltime Trade Dress with one brand or company.⁸

This result demonstrates that a large majority of customers and potential customers of women's clog shoes do not associate the Traveltime Trade Dress with one source.

⁵ See Exhibit 4.0.

⁶ See Exhibit 4.0.

⁷ See Exhibit 4.0.

⁸ See Exhibit 11.0.

IV. Background

A. Parties

1. Easy Spirit, LLC

Easy Spirit, LLC is a Delaware limited liability company with its principal place of business in Greenwich, Connecticut.⁹ The Easy Spirit shoe brand originated in 1985. Easy Spirit creates and sells women's footwear that is designed for comfort.¹⁰

2. Skechers U.S.A., Inc.

Skechers U.S.A., Inc. is a Delaware corporation with its principal place of business in Manhattan Beach, California.¹¹ Skechers is a “multi-billion-dollar, award-winning global brand.”¹² “Skechers designs and develops lifestyle and performance product known for style, innovation, quality and comfort.”¹³ In addition to its footwear offering, the company sells apparel and accessories for men, women and kids.¹⁴

3. Skechers U.S.A., Inc. II

Skechers U.S.A., Inc. II is a Virginia corporation with its principal place of business in Manhattan Beach, California.¹⁵ Skechers U.S.A., Inc. II is a subsidiary of the Skechers U.S.A., Inc.¹⁶

B. Easy Spirit's Trademarks

1. TRAVELTIME Trademark

On information and belief, the Traveltime shoe was introduced in 2004.¹⁷ In 2014 the Traveltime brand name was registered as a trademark under U.S. Registration No. 4,505,161.¹⁸

¹⁸ Complaint, p. 5 and Exhibit 6. *See also*, <http://tmsearch.uspto.gov/bin/showfield?f=doc&state=4806:nm20u2.2.1>.

2. Traveltime Trade Dress

Easy Spirit utilizes a combination of design elements for the appearance of the Traveltime shoe. Easy Spirit asserts the elements of this trade dress are (i) a slip-on, clog-style upper; (ii) a distinctive “swirl” mid-sole that runs from the base of the toe cap, gradually widening as it flows to the heel; (iii) an indented curved line along the midsole from the front to the heel; another indented line on the rear of the shoe; (iv) a combined contoured midsole/outsole with an arch that creates an open area between the outsole and heel; (v) the rubber outsole extending up from the bottom of the shoe to the front of the shoe to form a bumper; and (vi) four circular design elements on the midsole at the heel segment.¹⁹ The “Traveltime Trade Dress” includes the individual elements detailed above.²⁰ The shoe design below incorporates these elements.²¹

V. Likelihood of Confusion Survey

A. Survey Methodology

To determine whether customers and potential customers confuse Skechers' Commute Time shoes with being put out by, sponsored or approved by, and/or having a business affiliation

¹⁹ Complaint, pp. 5-6.

²⁰ It is my understanding that none of these asserted design elements have been registered as a U.S. trademark.

²¹ Complaint, pp. 5-6.

or connection to Easy Spirit, I constructed a sampling design and survey questionnaire that were used to collect the survey data. I identified the target population for this study as U.S. residents that are customers and potential customers of women's clog shoes. To reach this target population, I conducted a double-blind internet survey asking a series of questions to collect the survey data.²²

1. Sample Design

The appropriate target population for measuring likelihood of confusion is customers and potential customers of the type of product or service sold by junior user.²³ Therefore, the appropriate target population for this likelihood of confusion survey is customers and potential customers of women's clog shoes.²⁴

It is my understanding that Skechers' sells its Commute Time shoes and Easy Spirit sells its Travelttime shoes using the internet.²⁵ In other words, consumers encounter, shop for, and purchase these shoes in the e-retail marketplace. Therefore, an internet survey can accurately represent the marketplace in which relevant consumers shop for and purchase these shoes.

I developed an internet survey to test whether there was likely to be confusion in the marketplace by Skechers' use of "Commute Time" as the name for certain of its shoes. In order to draw a sample from the relevant population, the sample design I created approximated the U.S. population. That sample was provided by Dynata, a leading data collection and survey research firm.²⁶

²² A double-blind survey is one where neither the respondents nor the data collection organization conducting the survey were aware of the purposes of the research. A double-blind survey design prevents both parties from discerning an anticipated or preferred pattern of responses. (See Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council. p. 419).

²³ See McCarthy, J. Thomas, Proper Survey Methods: *Relevant "universe" surveyed—Defining the universe*, 6 McCarthy on Trademarks and Unfair Competition § 32:159 (5th ed. Nov. 2018).

²⁴ Specifically, the target population is customers 18 years old or older that do not suffer from color blindness and are customers and/or potential customers of women's clog shoes.

²⁵ See e.g., <https://www.easyspirit.com/comfortable-shoes-women/nowtrending/travelttime-family.html> and <https://www.skechers.com/en-us/sitesearch?t=commute%20time>. It is also, my understanding that Easy Spirit and Skechers sell these shoes through numerous other e-retailers and in various retail stores as well.

²⁶ <https://www.dynata.com/company/about-us/>.

A set of screening questions was used to select the appropriate respondents.²⁷ Sample members were qualified to participate in the research study if they indicated that:

- They were 18 years old or older;
- They do not suffer from color blindness; and,
- In the last 12 months, they personally had shopped for or purchased women's clogs, and/or, in the next 12 months, they plan to shop for or purchase women's clogs.

Internet interviews were completed, and the data was collected by Dynata at my direction and supervision. That data collection process occurred from March 24, 2020, through March 30, 2020.²⁸ In all, 404 surveys were completed.

2. Survey Questionnaire

Once sample members were qualified to participate in this research study, each respondent was randomly assigned to one of two groups – a treatment group²⁹ or a control group.³⁰ For the treatment group, a Skechers' webpage selling its Commute Time - Knitastic shoes was used. For the control group, the same Skechers' webpage selling its Commute Time - Knitastic shoes was used, but the accused trademark was removed. To do this, every instance of "Commute Time" on the main webpage was removed. This was done so that the control group stimulus would share as many characteristics with the treatment group stimulus as possible, with the key exception of the characteristic whose influence was being assessed.³¹ The random assignment to one of these two groups determined the questionnaire that was administered to the respondent.

²⁷ See Exhibit 15 for the screener questionnaire. A pretest was conducted which indicated that there were no data collection procedures or questionnaire design issues to address. Therefore, the surveys completed as part of the pretest were incorporated into the overall sample.

²⁸ Over this time, 8,422 respondents entered the survey and 404 completed the survey. See Exhibit 10.0 for the respondents' final dispositions.

²⁹ In an experimental design paradigm, the treatment group is the respondents that are exposed to a Skechers' webpage selling a Commute Time shoe.

³⁰ The control group is the respondents that are exposed to the modified Skechers webpage selling a Commute Time shoe with any reference to Commute Time removed from the page.

³¹ Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council, p. 399.

Respondents in each of these groups were first shown the following instruction:³²

Now you will be shown webpages that relate to women's shoes. Please look at these webpages as you would if you were considering purchasing these women's shoes. Once you have reviewed these images, you will be asked to answer the questions that follow.

As you answer these survey questions, please do not refer to or rely on any materials or other people to help you answer the survey questions.

If you do not know the answer to a particular question, please just indicate "Don't know" as the answer to that question.

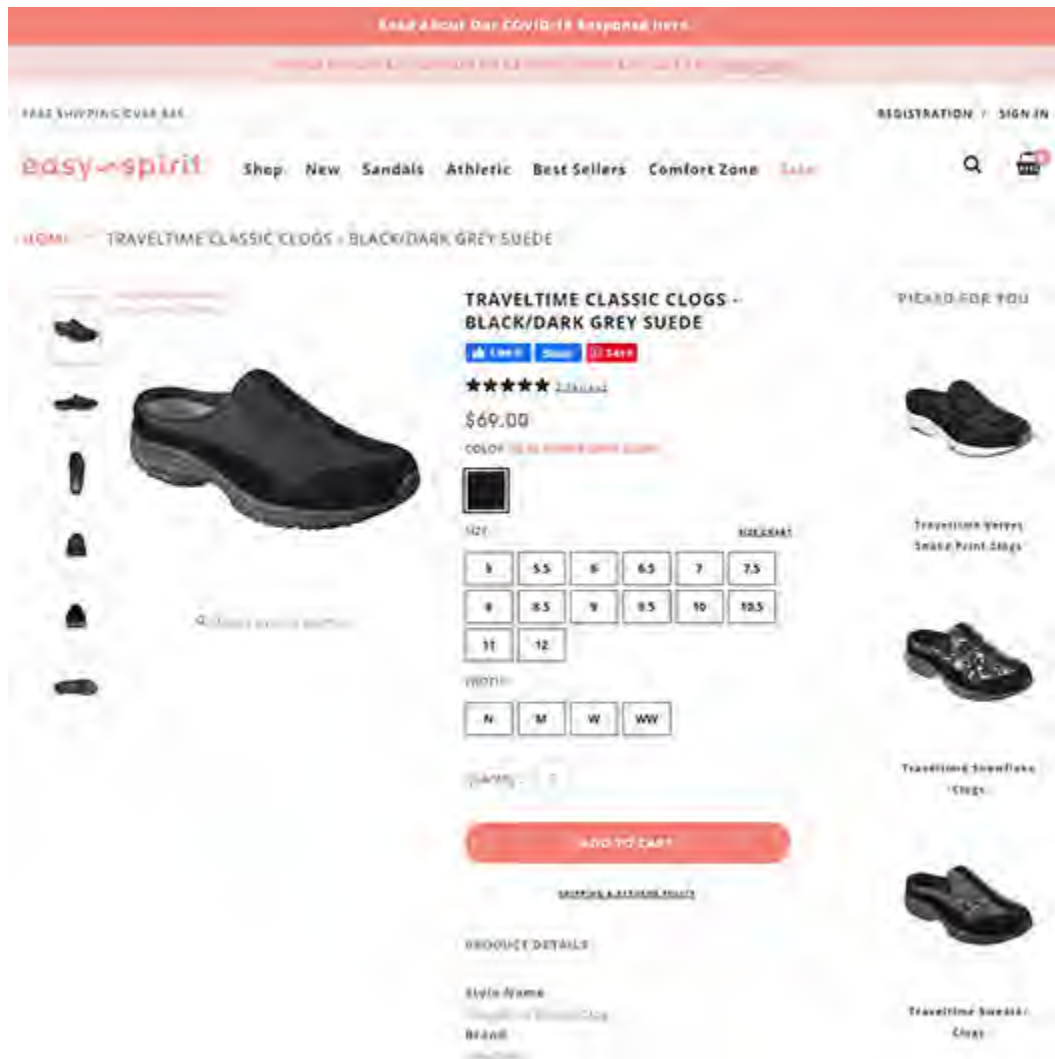

For respondents in the treatment group, respondents were next shown an Easy Spirit page selling its Traveltime Classic Clogs as follows:³³

³² See Exhibit 16 for the main survey questionnaire. See Exhibit 17 for screen shots of the survey.

³³ See Exhibit 16 for the main survey questionnaire. See Exhibit 17 for screen shots of the survey.

Figure 1: Easy Spirit's Webpage Selling its Traveltime Classic Clogs³⁴

Take as much time as you need to view these webpage as you would if you were considering purchasing these women's shoes. For the purposes of upcoming questions, this product will be referred to as the **first product** that you saw. Once you have reviewed this webpage, please continue:

Respondents were required to view this webpage and each subsequent webpage for at least five seconds before moving forward in the survey.

Next respondents were shown one of three different company webpages selling women's clog shoes randomly ordered.³⁵ For the treatment cohort, one of the company webpages selling

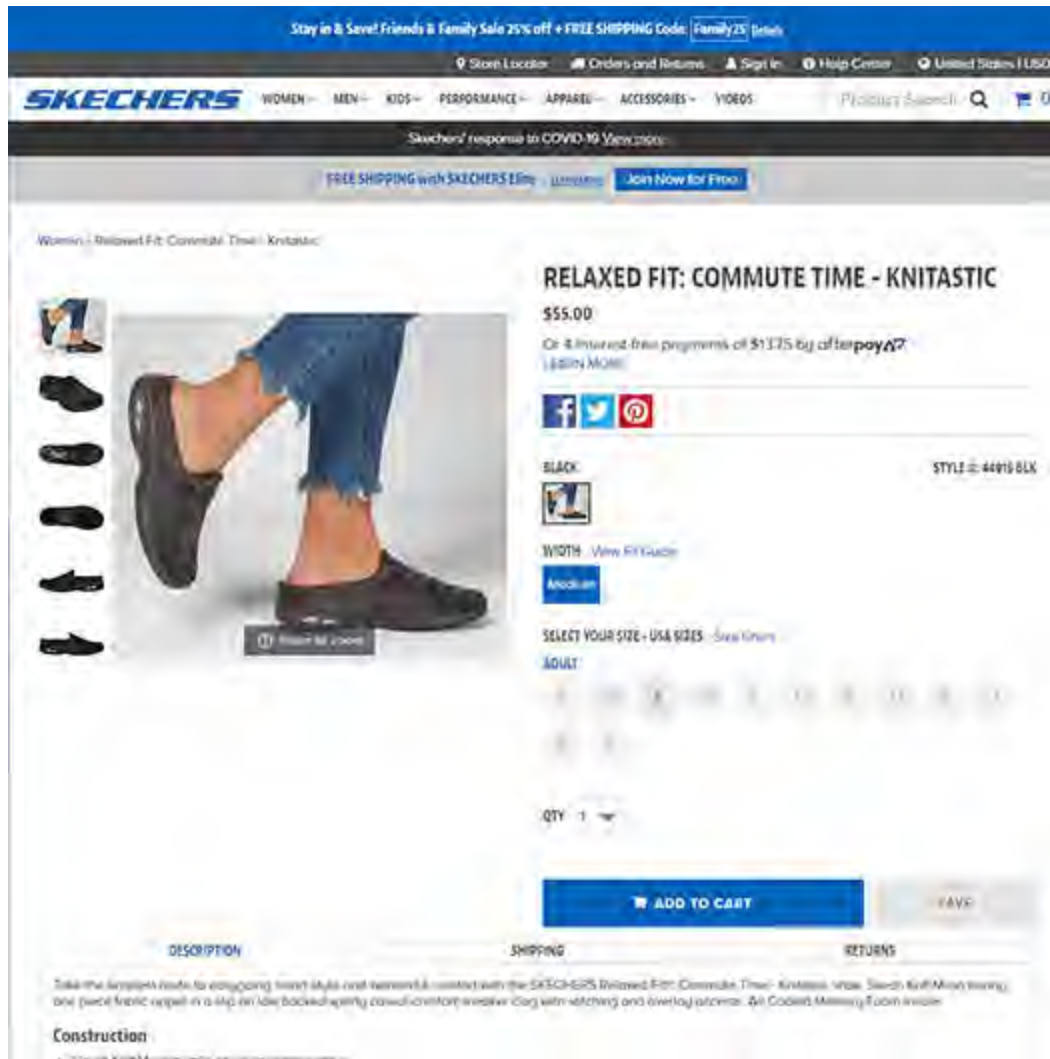

³⁴ This is only a portion of the image shown to respondents. See Exhibit 17 for the full images shown to respondents.

³⁵ The order of the web pages was randomly determined to avoid possible order effects.

women's clog shoes shown to them was a Skechers webpage selling its Commute Time – Knitastic shoes as it normally appears.

Figure 2: Skechers' Webpage Selling its Commute Time – Knitastic Shoes – Treatment³⁶

Once again, take as much time as you need to view this webpage that relates to women's shoes as you would if you were considering purchasing these women's shoes.

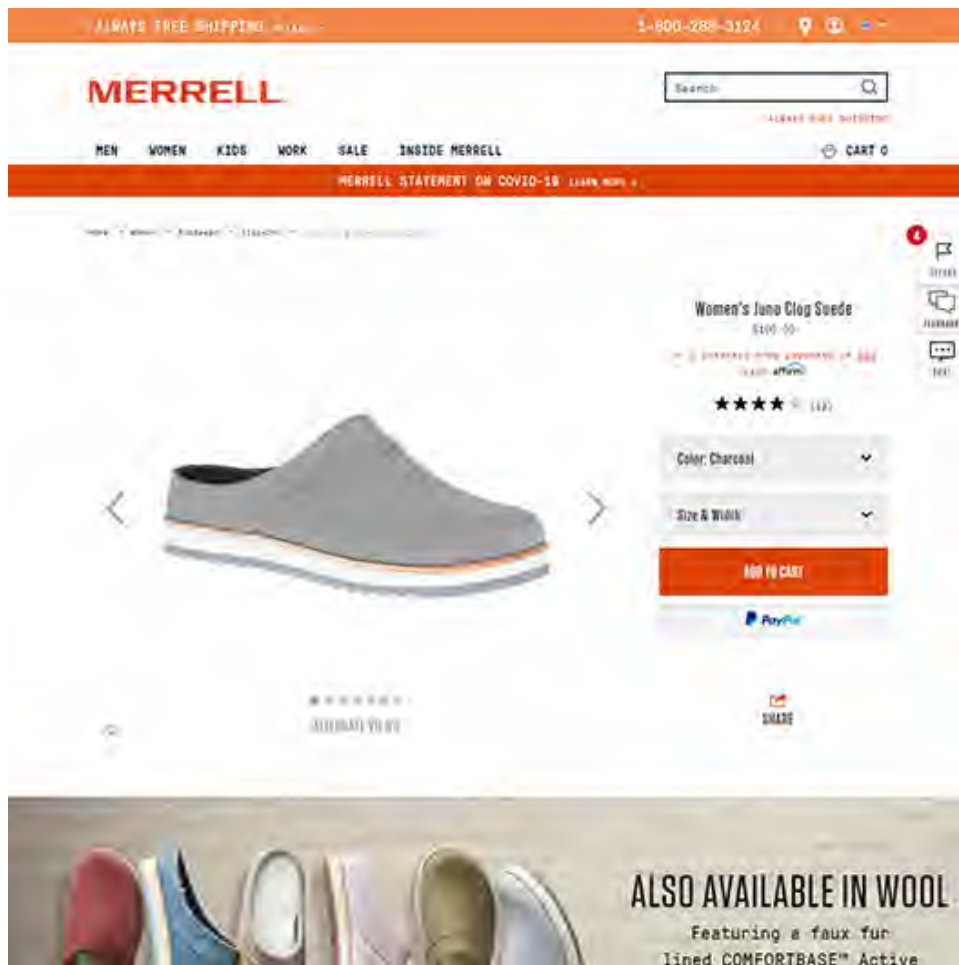

Respondents were also shown two other company webpages selling women's clog shoes. One of the company webpages selling women's clog shoes was a Merrell webpage selling its Women's Juno Clog Suede shoes shown below.

³⁶ This is only a portion of the image shown to respondents. See Exhibit 17 for the full images shown to respondents.

Figure 3: Merrell's Webpage Selling its Women's Juno Clog Suede Shoes³⁷

Once again, take as much time as you need to view this webpage that relates to women's shoes as you would if you were considering purchasing these women's shoes.

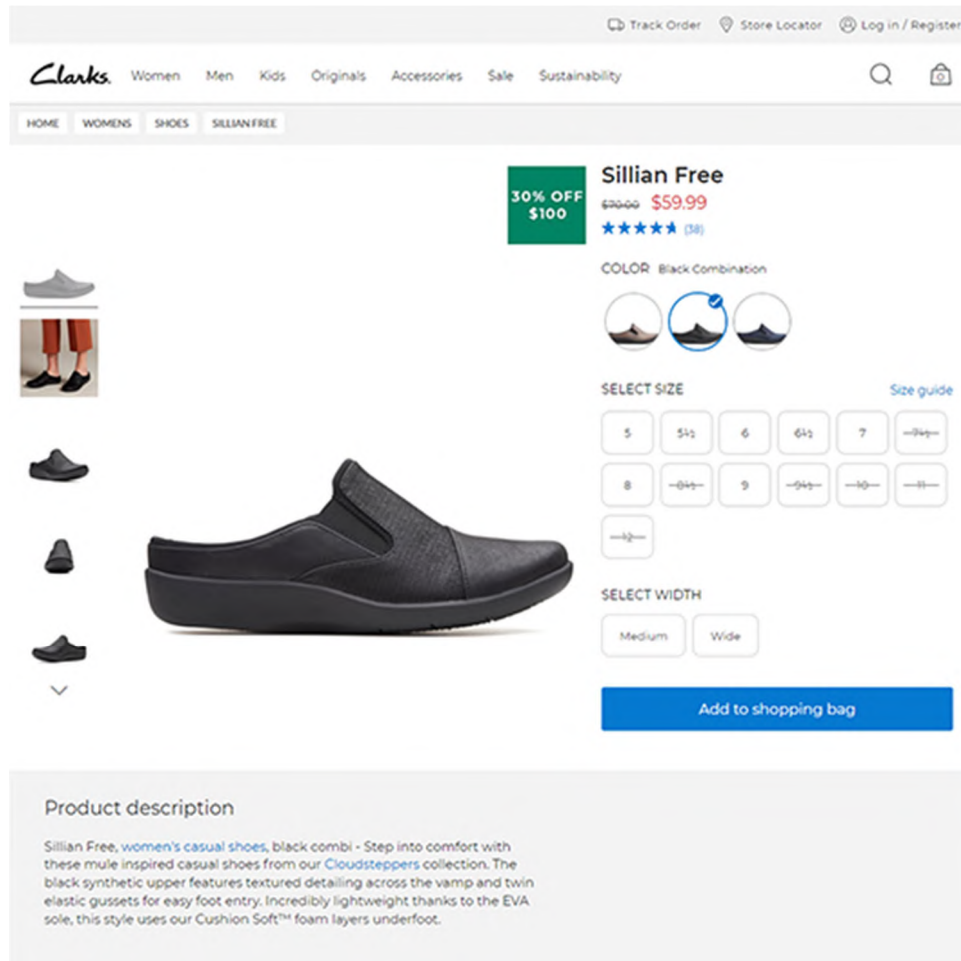

The other company webpage selling women's clog shoes was a Clarks webpage selling its Sillian Free shoes shown below.

³⁷ This is only a portion of the image shown to respondents. See Exhibit 17 for the full images shown to respondents.

Figure 4: Clarks' Webpage Selling its Sillian Free Shoes³⁸

Once again, take as much time as you need to view this webpage that relates to women's shoes as you would if you were considering purchasing these women's shoes.

For respondents in the treatment group, they were asked the following questions after each presentation of the company webpages selling women's clog shoes above:

Q1. Do you believe the women's shoe you just saw is put out by the **same** company/brand that puts out the first product that you saw or do you believe the women's shoe you just saw is put out by a **different** company/brand than the one that puts out the first product that you saw?

Select one.

<1> This product you just saw is put out by the **same** company/brand that puts out the first product that you saw

³⁸ This is only a portion of the image shown to respondents. See Exhibit 17 for the full images shown to respondents.

- <2> This product you just saw is put out by a **different** company/brand than the one that puts out the first product that you saw
- <3> Don't know

The word order of this question was varied to avoid possible order effects. Specifically, whether respondents saw the “same company” phrase first or the “different company” phrase first was randomly determined.³⁹

For those respondents that answered, “same company,” they were asked the following question:

Q2. What specifically makes you believe the women's shoe you just saw is put out by the same company/brand that puts out the first product that you saw?⁴⁰

Please be as specific as possible.

- <1> SPECIFY
- <2> Don't Know

For these respondents, as well as those respondents that indicated “different company” or “Don't Know” in Q1, they were asked:

Q3. Do you believe the company/brand that puts out the women's shoe you just saw **is** sponsored or approved to do so by the same company/brand that puts out the first product that you saw **or** do you believe the company/brand that puts out the women's shoe you just saw **is not** sponsored or approved to do so by the same company/brand that puts out the first product that you saw?

Select one.

- <1> The company/brand that puts out the product you just saw **is** sponsored or approved to do so by the same company/brand that puts out the first product that you saw
- <2> The company/brand that puts out the product you just saw **is not** sponsored or approved to do so by the same company/brand that puts out the first product that you saw

³⁹ The first two answer choices were randomized independently from the question wording randomization to avoid possible order effects.

⁴⁰ This was an open-ended question in which respondents were allowed to formulate and provide their response in their own words. See Ballou, Janice. “Open-Ended Question,” *Encyclopedia of Survey Research Methods*, Paul J. Lavrakas, Editor, SAGE Publications, Inc., Thousand Oaks, CA, 2008, pp. 547-549 at 547.

<3> Don't know

The word order of this question was also varied to avoid possible order effects. Specifically, whether respondents saw the “is sponsored or approved to do so by the same company” phrase first or the “is not sponsored or approved to do so by the same company” phrase first was randomly determined.⁴¹

For those respondents that answered, “is sponsored or approved to do so by the same company,” they were asked the following question:

Q4. What specifically makes you believe the company/brand that puts out the women's shoe you just saw is sponsored or approved to do so by the same company/brand that puts out the first product that you saw?⁴²

Please be as specific as possible.

<1> SPECIFY

<2> Don't Know

For those respondents that answered, “is not sponsored or approved to do so by the same company” or “Don't Know” to Q3 as well as the respondents that answered Q4, they were asked:

Q5. Do you believe the company/brand that puts out the women's shoe you just saw **has** a business affiliation or connection to the company/brand that puts out the first product that you saw **or** do you believe the company/brand that puts out the women's shoe you just saw **does not have** a business affiliation or connection to the company/brand that puts out the first product that you saw?

Select one.

- <1> The company/brand that puts out the product you just saw **has** a business affiliation or connection to the company/brand that puts out the first product that you saw
- <2> The company/brand that puts out the product you just saw **does not have** a business affiliation or connection to the company/brand that puts out the first product that you saw

⁴¹ The first two answer choices were randomized independently from the question wording randomization to avoid possible order effects.

⁴² This was an open-ended question in which respondents were allowed to formulate and provide their response in their own words.

<3> Don't know

The word order of this question was also varied to avoid possible order effects. Specifically, whether respondents saw the “has a business affiliation or connection to the company/brand that puts out the first product” phrase first or the “does not have a business affiliation or connection to the company/brand that puts out the first product” phrase first was randomly determined.⁴³

For those respondents that answered, “has a business affiliation or connection to the company/brand that puts out the first product,” they were asked the following question:

Q6. What specifically makes you believe the company/brand that puts out the women's shoe you just saw has a business affiliation or connection to the company/brand that puts out the first product that you saw?⁴⁴

Please be as specific as possible.

<1> SPECIFY

<2> Don't Know

For those respondents that answered, “does not have a business affiliation or connection to the company/brand that puts out the first product” or “Don't Know” to Q5 as well as the respondents that answered Q6, they were shown the next company webpage selling women's clog shoes. The order in which the company webpages selling women's clog shoes appeared was randomly determined to avoid possible order effects. After each image was shown, the same block of questions outlined above were asked about that company webpage selling women's clog shoes. This was done until respondents were shown each of the three company webpages selling women's clog shoes described above and asked the corresponding questions.

For respondents in the control group, they were asked the same questions about each of the company webpages selling women's clog shoes shown.⁴⁵ However, control group respondents were not shown the Skechers webpage selling its Commute Time - Knitastic shoes

⁴³ The first two answer choices were randomized independently from the question wording randomization to avoid possible order effects.

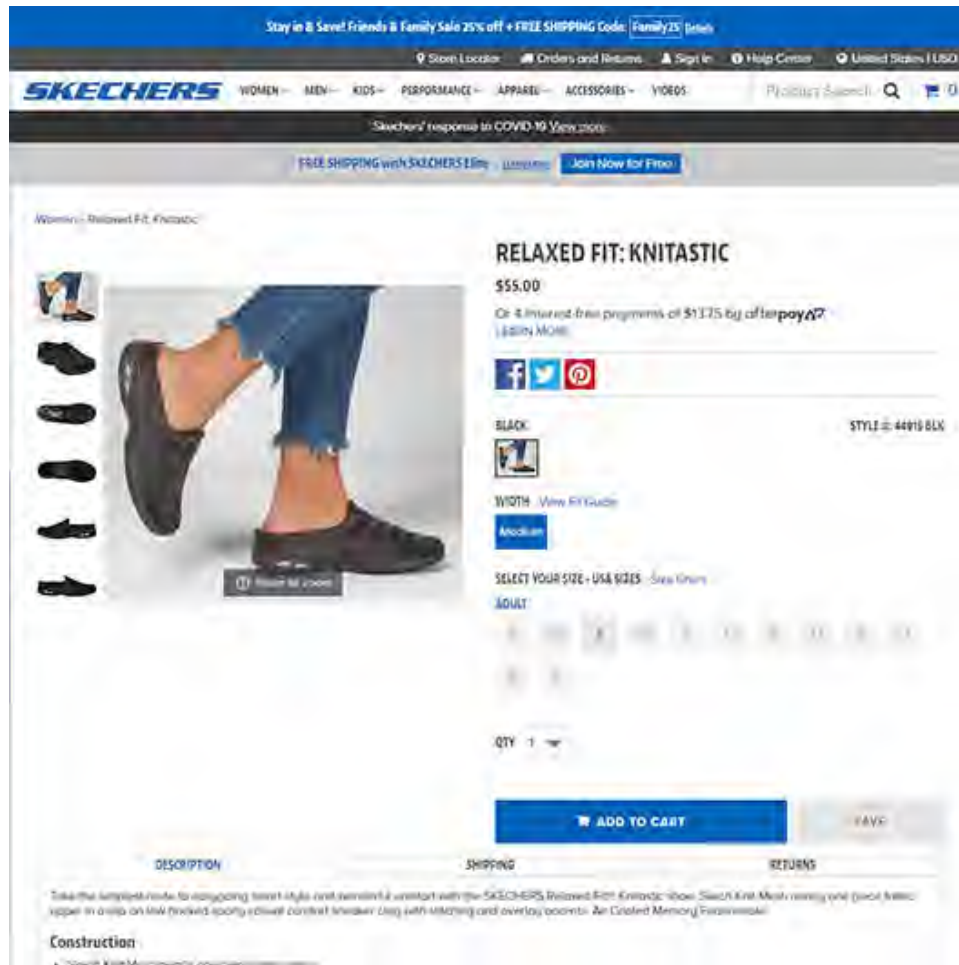

⁴⁴ This was an open-ended question in which respondents were allowed to formulate and provide their response in their own words.

⁴⁵ See Exhibit 16 for the main survey questionnaire. See Exhibit 17 for screen shots of the survey.

as it normally appears. Instead, they were shown a modified version of Skechers' webpage selling Knitastic shoes, which removed each instance of Commute Time on the webpage.⁴⁶

Figure 5 Skechers' Webpage Selling Knitastic Shoes – Control⁴⁷

Once again, take as much time as you need to view this webpage that relates to women's shoes as you would if you were considering purchasing these women's shoes.

⁴⁶ “In designing a survey-experiment, the expert should select a stimulus for the control group that shares as many characteristics with the experimental stimulus as possible, with the key exception of the characteristic whose influence is being assessed.” See Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council, p. 399.

⁴⁷ This is only a portion of the image shown to respondents. See Exhibit 17 for the full images shown to respondents.

The design of this survey is sometimes referred to as a product array survey.⁴⁸ First, respondents are shown the senior user's webpage selling its Traveltime Classic Clogs. Next, respondents are shown a rotation of other company webpages selling women's clog shoes, including the company webpage selling women's clog shoes containing the allegedly infringing trademark. Series of questions are used to determine respondents' beliefs about whether or not there are relationships between the senior user's use of the Trademark for its clog and the women's clogs in the webpages in the "array."

In addition, a control was used to address the research question while attempting to remove pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey. To the extent respondents to this survey brought pre-existing beliefs, guesses, or other background noise that inappropriately shaped their responses, the use of a control group directly addresses and accounts for this issue.⁴⁹

3. Survey Results

As described above, there were 404 completed interviews; 203 respondents were assigned to the treatment group, and 201 were assigned to the control group. Examining the survey data, respondents from the treatment group and control group answered the survey questions as summarized below.⁵⁰

Q1. Do you believe the women's shoe you just saw is put out by the **same** company/brand that puts out the first product that you saw **or** do you believe the women's shoe you just saw is put out by a **different** company/brand than the one that puts out the first product that you saw?

⁴⁸ See McCarthy, J. Thomas, *Survey Evidence: Survey Formats—Two commonly used formats to test confusion*, 6 McCarthy on Trademarks and Unfair Competition § 32:173.50 (5th ed. Oct. 2018). See also, *Squirteco v. Seven-Up Co.* 628 F.2d 1086, 1089 n.4, 1091 (8th Cir. 1980). This type of study is appropriate in this case because Easy Spirit and Skechers sell their clog shoes using the internet. See e.g., <https://www.easyspirit.com/comfortable-shoes-women/nowtrending/traveltime-family.html> and <https://www.skechers.com/en-us/sitesearch?t=commute%20time>.

⁴⁹ See Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council, pp. 397-401.

⁵⁰ A summary of the responses to the screener questions can be found in Exhibit 8.0.

Table 1: Respondents Shown Skechers' Webpage Selling its Commute Time – Knitastic Shoes (Treatment Group)⁵¹

	Number of Respondents	Percentage
This product you just saw is put out by the same company/brand that puts out the first product that you saw	49	24.1%

4. Analyses

a. Examination of Source Confusion

When respondents from the treatment group were presented with Skechers' webpage selling its Commute Time – Knitastic shoes, 49 of the 203 respondents (24.1%) indicated they believed the Commute Time – Knitastic shoes shown were put out by Easy Spirit.⁶⁹ Of these respondents, only 4.1% identified the brand or the name on the product as the reason for believing the Commute Time – Knitastic shoes shown were put out by Easy Spirit, while 8.2% identified Skechers.⁷⁰ However, as discussed above, it is important to remove pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey.⁷¹ Therefore, the control questionnaire was administered to a randomly selected sample to gauge the percentage of respondents who believed the control stimulus, the Knitastic shoes in the modified Skechers webpage, were put out by Easy Spirit. Fifty out of 201 respondents (24.9%) in the control group indicated they believe the Knitastic shoes in the modified Skechers webpage shown were put out by Easy Spirit.⁷² Accordingly, after controlling for pre-existing beliefs, guesses, other background noise, and the non-asserted elements of the product and the webpage, the net result is 0.0%.⁷³ This net result indicates that Skechers has not used Easy Spirit's trademark in a manner that is likely to cause confusion, mistake, or deception among customers and/or potential customers as to the source or origin of Skechers' Commute Time – Knitastic shoes.⁷⁴

b. Examination of Sponsorship or Approval Confusion

When respondents from the treatment group were presented with Skechers' webpage selling its Commute Time – Knitastic shoes, 53 of the 203 respondents (26.1%) indicated they

⁶⁹ See Exhibit 5.0 and Table 1.

⁷⁰ See Exhibit 5.1 and Table 3.

⁷¹ See Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council, pp. 397-401.

⁷² See Exhibit 5.0 and Table 2.

⁷³ See Exhibit 4.0.

⁷⁴ See Exhibit 4.0. According to Professor McCarthy, "When the percentage results of a confusion survey dip below 10%, they can become evidence which will indicate that confusion is not likely." See McCarthy, J. Thomas, *Survey Evidence: Likelihood of confusion—Percentage figures in the cases—Evidence of no likelihood of confusion*, 6 McCarthy on Trademarks and Unfair Competition § 32:189 (5th ed. Nov. 2018).

believed the company that puts out the Commute Time – Knitastic shoes shown was sponsored or approved by Easy Spirit.⁷⁵ Once again, it is important to remove pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey.⁷⁶ When respondents from the control group were presented with the Knitastic shoes in the modified Skechers webpage, 61 out of 201 respondents (30.3%) indicated they believed the company that puts out the Knitastic shoes in the modified Skechers webpage shown was sponsored or approved by Easy Spirit.⁷⁷ Accordingly, after controlling for pre-existing beliefs, guesses, other background noise, and the non-asserted design elements of webpage, the net result is 0.0%.⁷⁸ This net result indicates that Skechers has not used Easy Spirit’s trademark in a manner that is likely to cause confusion, mistake, or deception among customers and/or potential customers as to the sponsorship or approval of Skechers’ Commute Time – Knitastic shoes.⁷⁹

c. Examination of Affiliation or Connection Confusion

When respondents from the treatment group were presented with Skechers’ webpage selling its Commute Time – Knitastic shoes, 65 of the 203 respondents (32.0%) indicated they believed the company that puts out the Commute Time – Knitastic shoes shown have a business affiliation or connection to Easy Spirit.⁸⁰ Once again, it is important to remove pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey.⁸¹ When respondents from the control group were presented with the Knitastic shoes in the modified Skechers webpage, 70 out of 201 respondents (34.8%) indicated they believed the company that puts out the Knitastic shoes in the modified Skechers webpage shown has a business affiliation

or connection to Easy Spirit.⁸² Accordingly, after controlling for pre-existing beliefs, guesses, other background noise, and the non-asserted design elements of the product, the net result is 0.0%.⁸³ This net result indicates that Skechers has not used Easy Spirit's trademark in a manner that is likely to cause confusion, mistake, or deception among customers and/or potential customers as to the affiliation or connection of Skechers' Commute Time – Knitastic shoes.⁸⁴

VI. Secondary Meaning Survey

A. Survey Methodology

To determine whether customers and potential customers recognize and associate the Traveltime Trade Dress with one or more than one brand or company, I constructed a sampling design and survey questionnaire that were used to collect the survey data. I identified the target population for this study as U.S. residents that are customers and potential customers of women's clog shoes. To reach this target population, I conducted a double-blind internet survey asking a series of questions to collect the survey data.⁸⁵

1. Sample Design

The appropriate target population for measuring secondary meaning is customers and potential customers of women's clog shoes.⁸⁶ Therefore, in this case, the appropriate target population is purchasers and potential purchasers of Easy Spirit's Traveltime shoes.

⁸² See Exhibit 7.0 and Table 10.

⁸³ See Exhibit 4.0.

⁸⁴ See Exhibit 4.0. According the Professor McCarthy, "When the percentage results of a confusion survey dip below 10%, they can become evidence which will indicate that confusion is not likely." See McCarthy, J. Thomas, *Survey Evidence: Likelihood of confusion—Percentage figures in the cases—Evidence of no likelihood of confusion*, 6 McCarthy on Trademarks and Unfair Competition § 32:189 (5th ed. Nov. 2018).

⁸⁵ A double-blind survey is one where neither the respondents nor the data collection organization conducting the survey were aware of the purposes of the research. A double-blind survey design prevents both parties from discerning an anticipated or preferred pattern of responses. (See Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council. p. 419).

⁸⁶ Specifically, the target population is customers 18 years old or older that do not suffer from color blindness and are customers and/or potential customers of women's clog shoes.

As discussed above, it is my understanding that Easy Spirit sells its Traveltime shoes using the internet.⁸⁷ In other words, consumers encounter, shop for, and purchase these shoes in the e-retail marketplace. Therefore, an internet survey can accurately represent the marketplace in which relevant consumers shop for and purchase these shoes.

As a result, I developed an internet survey to test whether secondary meaning had accrued to Easy Spirit's asserted trade dress. In order to draw a sample from the relevant population, the sample design was chosen to approximate the U.S. population. That sample was provided by Dynata, a leading data collection and survey research firm.⁸⁸

A set of screening questions was used to select the appropriate respondents.⁸⁹ Sample members were qualified to participate in the research study if they indicated that:

- They were 18 years old or older;
- They do not suffer from color blindness; and,
- In the last 12 months, they personally had shopped for or purchased women's clogs, and/or, in the next 12 months, they plan to shop for or purchase women's clogs.

Internet interviews were completed, and the data was collected by Dynata at my direction and supervision. That data collection process occurred from March 18, 2020, through March 27, 2020.⁹⁰ In all, 400 surveys were completed.

2. Survey Questionnaire

Once sample members were qualified to participate in the research study, each respondent was randomly assigned to one of two groups – a treatment group⁹¹ or a control

⁸⁷ See e.g., <https://www.easyspirit.com/comfortable-shoes-women/nowtrending/traveltime-family.html>. It is also, my understanding that Easy Spirit sells these shoes through numerous other e-retailers and in various retail stores as well.

⁸⁸ <https://www.dynata.com/company/about-us/>.

⁸⁹ See Exhibit 18 for the screener questionnaire. A pretest was conducted which indicated that there were no data collection procedures or questionnaire design issues to address. Therefore, the surveys completed as part of the pretest were incorporated into the overall sample.

⁹⁰ Over this time, 7,168 respondents entered the survey and 400 completed the survey. See Exhibit 14.0 for the respondents' final dispositions.

⁹¹ In an experimental design paradigm, the treatment group is the respondents that are exposed to Easy Spirit's Traveltime Classic Clog.

group.⁹² For the treatment group, respondents were shown images of the Traveltime Classic Clog, which included the alleged Traveltime Trade Dress.⁹³ For the control group, the same Traveltime Classic Clog was used, but the alleged trade dress was removed. To do this, the images of the Traveltime Classic Clog were adjusted so that the shoe no longer included the alleged trade dress. This was done so that the control group stimulus would share as many characteristics with the treatment group stimulus as possible, with the key exception of the characteristics whose influence were being assessed.⁹⁴ In both the treatment and control images, the “EASY SPIRIT” logo was removed from the insole of the shoe.⁹⁵ The random assignment to one of these two groups determined the questionnaire that was administered to the respondent.

Respondents in each of these groups were first shown the following instruction:⁹⁶

Now you will be shown pictures of women’s shoes. Please look at these shoes as you would if you were considering purchasing this product. Once you have reviewed these images, you will be asked to answer the questions that follow.

As you answer these survey questions, please do not refer to or rely on any materials or other people to help you answer the survey questions.

If you do not know the answer to a particular question, please just indicate “Don’t Know” as the answer to that question.

For respondents in the treatment group, respondents were next shown images of Easy Spirit’s Traveltime Classic Clog as follows:⁹⁷

Figure 6: Easy Spirit’s Traveltime Classic Clog - Treatment

Take as much time as you need to view these pictures of women’s shoes as you would if you were considering purchasing this product.

⁹² The control group is the respondents that are exposed to the modified Easy Spirit Traveltime Classic Clog with the alleged trade dress removed.

⁹⁶ See Exhibit 19 for the main survey questionnaire. See Exhibit 20 for screen shots of the survey.

⁹⁷ See Exhibit 19 for the main survey questionnaire. See Exhibit 20 for screen shots of the survey.

Please click on any of the product images below the main image to enlarge the image.

The respondents were able to see each aspect of the shoe by selecting the images below the main image. Respondents were required to view these images for at least five seconds before moving forward in the survey.

After viewing the images in Figure 6, respondents in the treatment group were asked the following questions.

Q1. Without guessing and without using any other outside materials to help you, have you ever seen or purchased these women's shoes?

If you don't know, please just indicate that.

- <1> Yes
- <2> No
- <3> Don't know

The respondents that answered "No" or "Don't know" to this question the survey was concluded. For respondent that answered "Yes," they were then asked:

Q2. Do you associate these women's shoes with shoes from one brand/company or more than one brand/company?

Select One.

- <1> One brand/company
- <2> More than one brand/company
- <3> Don't know

The word order of this question was varied to avoid possible order effects. Specifically, whether respondents saw the “one brand/company” phrase first or the “more than one brand/company” phrase first was randomly determined.⁹⁸ For those respondents that indicated “one brand/company,” they were asked:

Q3. What brand/company do you associate with these women's shoes?⁹⁹

Please be as specific as possible.

- <1> SPECIFY
- <2> Don't know

For those respondents that specified an answer, they were asked:

Q4. What is it about these women's shoes that has you associate them with the brand/company that you mentioned?¹⁰⁰

Please be as specific as possible.

- <1> SPECIFY
- <2> Don't know

For those respondents that answered, “More than one brand/company” or “Don't know” to Q2; “Don't know” to Q3, as well as the respondents that answered Q4, the survey was concluded.

The questions were structured to determine first whether customers or potential customers recognized the Traveltime Classic Clog with the Traveltime Trade Dress. Then, establishing recognition of the shoes with the trade dress, the follow-up questions were asked to determine if these customers or potential customers associated the Traveltime Trade Dress, with

⁹⁸ The first two answer choices were randomized independently from the question wording randomization to avoid possible order effects.

⁹⁹ This was an open-ended question in which respondents were allowed to formulate and provide their response in their own words.

¹⁰⁰ This was an open-ended question in which respondents were allowed to formulate and provide their response in their own words.

one company (or source) or with multiple companies. This directly addresses the research question: whether the Traveltime Trade Dress has acquired a distinctiveness associated with that trade dress to stand for the goods that Easy Spirit offers.

For respondents in the control group, they were asked the same questions above.¹⁰¹ However, control group respondents were not shown the Traveltime Classic Clog with the Traveltime Trade Dress as it normally appears. Instead, they were shown a modified version of the Traveltime Classic Clog with the trade dress removed from the shoe.¹⁰²

Figure 7: Easy Spirit's Traveltime Classic Clog – Control

Once again, the purpose of the control group is to address the research question while attempting to remove pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey. To the extent that respondents to this survey brought pre-existing

¹⁰¹ See Exhibit 19 for the main survey questionnaire. See Exhibit 20 for screen shots of the survey.

¹⁰² “In designing a survey-experiment, the expert should select a stimulus for the control group that shares as many characteristics with the experimental stimulus as possible, with the key exception of the characteristic whose influence is being assessed.” See Diamond, Shari Seidman. 4. Analyses

When respondents from the treatment group were asked about the origin of Easy Spirit's Traveltime Classic Clog with the Traveltime Trade Dress, 23.0% of those respondents associated that shoe with one source.¹¹⁹ However, as discussed above, it is important to remove pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey.¹²⁰ Therefore, the control questionnaire was administered to a randomly selected sample to gauge the percentage of respondents that associated the control stimulus, the Traveltime Classic Clog with the trade dress removed, as originating from one source. When respondents from the control group were asked about the origin of the Traveltime Classic Clog with the trade dress removed, 22.0% of those respondents associated that shoe with one source.¹²¹ The difference between the

¹¹⁶ This is the number of respondents who saw this question in the survey.

¹¹⁷ See Exhibit 11.2.

¹¹⁸ This is the number of respondents who saw this question in the survey.

¹¹⁹ See Exhibit 11.0.

¹²⁰ See Diamond, Shari Seidman. Reference Guide on Survey Research, *Reference Manual on Scientific Evidence, Third Edition*. Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, Federal Judicial Center, National Research Council, pp. 397-401.

¹²¹ See Exhibit 11.0.

percentage of treatment group respondents that said “One Company” and the percentage of control group respondents that said “One Company” is the measure of what percentage of U.S. customers and potential customers of women’s clog shoes associates the Traveltime Trade Dress with one source. In this case, that percentage is 1.0% after controlling for pre-existing beliefs, guesses, and other background noise.¹²²

This suggests that there is a large majority of customers and potential customers of women’s clog shoes that do not associate the Traveltime Trade Dress with one source.

VII. Conclusions

Based on my review of the survey results of the likelihood of confusion survey I conducted, I conclude that there is insufficient evidence to show that Skechers’ use of Commute Time is likely to cause confusion in the marketplace. Specifically, I found that:

- Controlling for pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey, 0.0% of respondents believed Easy Spirit was the source of the Skechers’ Commute Time shoes.¹²³
- 0.0% of respondents believed Easy Spirit sponsored or approved Skechers’ Commute Time shoes.¹²⁴
- 0.0% of respondents believed there was a business affiliation or connection between Skechers’ Commute Time shoes and Easy Spirit.¹²⁵

These results demonstrate that customers and potential customers of Skechers’ Commute Time shoes are not confused, mistaken, or deceived about Easy Spirit being the source or origin of Skechers’ Commute Time shoes, about Easy Spirit sponsoring or approving Skechers’ Commute Time shoes, or about Easy Spirit being affiliated with Skechers’ Commute Time shoes.

Based on my review of the survey results of the secondary meaning survey I conducted, I conclude that there is insufficient evidence to show that Easy Spirit’s alleged trade dress has acquired secondary meaning in the marketplace. Specifically, I found that:

¹²² 23.0% – 22.0% = 1.0%. See Exhibit 11.0.

¹²³ See Exhibit 4.0.

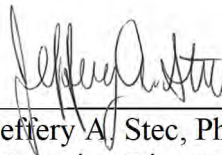

¹²⁴ See Exhibit 4.0.

¹²⁵ See Exhibit 4.0.

- Controlling for pre-existing beliefs, guesses, and other background noise that respondents may bring to the survey, 1.0% of respondents associated the alleged Traveltime Trade Dress with one brand or company.¹²⁶

This result demonstrates that a large majority of customers and potential customers of women's clog shoes do not associate the Traveltime Trade Dress with one source.

As a Managing Director, leader of Berkeley Research Group's Intellectual Property Practice, and co-leader of its Economics and Damages Community, Dr. Stec has worked extensively over the last 17 years in the areas of antitrust, finance, intellectual property, and survey research, both as a consulting expert and as an expert witness. His engagements typically involve the application of economic, financial, statistical, and survey research theory and methodology to the collection and analysis of data to evaluate the economic impact of decisions made by consumers and firms.

In the area of intellectual property, Dr. Stec has conducted economic and econometric analyses to determine the value of intellectual property as well as the amount of economic damages resulting from patent, trademark, trade secret, or copyright infringement. In his work, he has addressed economic issues such as the appropriate measurement of revenues associated with the use of the infringing IP, the portion of those revenues that can be attributed to the intellectual property, and whether the apportionment can be regarded as reasonable. He has evaluated economic and survey research issues in the context of Section 337 investigations conducted by the U.S. International Trade Commission. In addition, he has also evaluated the effects of anticompetitive conduct as it relates to the use of IP. In the context of trademarks and trade dress, he has evaluated issues of secondary meaning, genericness, dilution, and likelihood of confusion. Dr. Stec has also determined economic damages that have resulted from false advertising and counterfeit claims.

In the area of survey research, Dr. Stec has both created and critically evaluated surveys in the context of antitrust and intellectual property engagements. He has developed complex sample designs, designed survey questionnaires, and collected and analyzed survey data, including the derivation of complex variance estimates using simulation methods. He has conducted surveys that have been used to determine consumers' perceptions and actions in the marketplace, including whether products' names or trade dress are distinctive, confusing, or generic. Dr. Stec has also examined how products are used in the marketplace and how consumers value product features. Dr. Stec has consulted on best survey practices for the design, collection, and analysis of survey data.

In the area of antitrust, Dr. Stec has used economic and econometric analyses to investigate issues related to market definition, determination of market power or market dominance, and the effect of anticompetitive acts on competition. Some of these investigations include the effects of anticompetitive acts in the context of Sherman, Clayton, and Robinson-Patman Act claims dealing with abuse of market power as well as the use of various horizontal and vertical restraints, like price fixing, price discrimination, refusals to deal, exclusive dealing arrangements, and tying, on individual firms or members of a class.

In the area of finance, Dr. Stec has used financial theory and econometrics to conduct analyses to determine asset values and shareholder loss in the context of securities fraud and late trading claims. These analyses have included the use of various loss causation and event study paradigms as well as trading simulation studies. Dr. Stec has examined claims of financial lending discrimination, which included investigations of the likelihood of discrimination and the potential damages caused by that

discrimination. Dr. Stec has also used financial theory to determine damages in commercial contract disputes and product liability litigation.

Engagements Dr. Stec has worked on have dealt with the semiconductor and semiconductor design, computer software and hardware, consumer products, pharmaceuticals, telecommunications, handheld mobile devices, paper products, casino gaming, consumer appliances, automated pharmacy systems, consumer electronics, automobiles, heavy haul truck trailers, textile machine, precious stones, fashion apparel and luxury accessories, outdoor lighting, vehicle parts, medical products, hardware, product packaging, toys, entertainment, food, mass media, plastics, pallet, television ratings, financial securities and loans, alcohol, tobacco, sugar, sweetener, and tradeshow industries, among others.

Prior to joining Berkeley Research Group, Dr. Stec had been engaged as a Vice President in economic and survey research consulting with another economic consulting firm. Prior to that, he has analyzed the credit card industry in detail, including co-authoring monthly state and national surveys to gauge consumers' credit card and overall indebtedness. He also helped to design numerous telephone, mail, and internet surveys for various clients. His responsibilities included everything from sample and questionnaire design to data collection methods and statistical analyses of survey data. He has performed econometric studies and written on various economic and survey research topics such as, optimal forecasting methods using time-series data, the effects of unit nonresponse on survey data, efficient methods for conducting telephone surveys, and methods for gauging the degree of consumer indebtedness using original survey data.

Dr. Stec has presented his research at the annual meetings of the American Statistical Association, the American Association of Public Opinion Research, the Midwest Association of Public Opinion Research, the Ohio Association of Economists and Political Scientists, the Midwest Macroeconomics Association, and the Columbus Association of Business Economists as well as in numerous presentations as a guest lecturer and presenter for CLE courses. He has also published his work in the American Statistical Association's Proceedings of the Section on Survey Research Methods and Proceedings of the Section on Government Statistics and Section on Social Statistics. Dr. Stec also contributed and served as a member of the advisory board for the *Encyclopedia of Survey Research Methods*. He has also written the chapter on the use of surveys in litigation published in the *Litigation Services Handbook*.

EDUCATION

Ph.D., Economics	The Ohio State University, 2000
M.A., Economics	The Ohio State University, 1995
B.A., Economics, Math Minor	The University of Illinois – Chicago, 1994
B.A., Philosophy, Psychology	Cornell University, 1991

PROFESSIONAL EXPERIENCE

2004-2017	<i>Vice President</i> , Intellectual Property, Charles River Associates
2000-2004	<i>Director</i> , Intellectual Property, InteCap, Inc.

SELECTED EXPERIENCE

Intellectual Property

Developed economic models to determine damages due to infringement of patents held by a large paper products company. Included a determination of the damages due to the plaintiff's loss of distribution for its patented products due to the infringement of the defendant. Developed a lost distribution model to quantify the amount of distribution lost and the value of that distribution in terms of lost sales to the plaintiff. Additionally, it included the development of a lost profits, market share based model that quantified the lost profits due to lost customers' sales.

Provided expert testimony in a patent infringement litigation in the plastic product manufacturing industry. Determined the percentage of accused products that infringed a number of patents by developing and conducting a multi-stage probability sample of the relevant plastic packaged products. Responsibilities included sample design, overseeing data collection, and data analysis using advanced statistical methods.

Developed economic models to determine damages suffered by a manufacturer of pharmaceutical products as a result of infringement of a number of patents. Studied the market for the patented product, evaluated the substitutability of potentially competing products, and determined sales and profits lost by the patent holder. Constructed and queried a large product database to determine which products infringed which of the many patents-in-suit. Developed analyses of a reasonable royalty under a hypothetical licensing agreement and the effect of the infringing product on the price in the marketplace. Evaluated an econometric market expansion theory proposed by the counterparty.

Developed economic models to determine damages suffered by a manufacturer of semiconductor devices as a result of a competitor's infringement of numerous patents. Determined the profits the plaintiff lost due to price erosion and a determination of reasonable royalties on infringing sales. Constructed a sophisticated econometric model using a large dataset of sales, prices, and other variables that estimated the price elasticity of demand for the relevant product and geographic markets.

Provided expert testimony in a trademark infringement litigation in the children's toy industry. Determined whether survey data were appropriately collected and analyzed in the evaluation of secondary meaning to a mark. Evaluated the survey methodology used by the counterparty to determine whether secondary meaning had accrued to the mark.

Constructed and queried a large proprietary database of regional oil and gas prices to determine differences in branded and generic prices for the purposes of determining the value of a gasoline trademark. Included filtering of the database to examine price differences for various grades of gasoline, various regions of operation, and various time periods

Provided expert testimony in a trademark infringement litigation in the wine industry. Determined whether survey data were appropriately collected and analyzed in the context of likelihood of confusion between two marks. Evaluated the survey methodology used by the counterparty to determine whether there was survey evidence of the likelihood of confusion between the marks.

Developed economic models to determine damages suffered by a manufacturer of coronary medical devices as a result of a competitor's infringement of numerous patents. Developed lost profits and reasonable royalty models addressing issues such as market definition, product pricing in the absence of infringement, market size and competitors' market share in the absence of infringement, and

determination of incremental costs. Developed sophisticated econometric models to address these issues.

Provided expert testimony in a theft of trade secrets in the investor relations services and technology industry. Determined expected client longevity in the absence of the theft of trade secrets taking into account client-specific characteristics using multivariate statistical models that also accounted for the censored nature of the underlying data. Developed damages models using the expected client longevity and the actual client longevity to determine the impact of the alleged theft of trade secrets.

Developed economic models to determine damages suffered by a consumer goods manufacturer as a result of counterfeit sales being made by various retailers. Determined the profits the plaintiff lost due to price erosion in the relevant product and geographic markets. Developed econometric models to determine the price elasticity of demand for the impacted consumer goods.

Developed economic models to determine damages suffered by inventors of children's consumer products as a result of infringement of a number of patents. Evaluated the product and geographic markets for the patented product; valued the patented technology, including the determination of the impact of the use of the patented technology on the infringer's sales and profits and the costs to design around the infringed technology; and determined the impact various other factors would have on the royalty rate that might be negotiated by both parties.

Developed economic models to determine damages suffered by a manufacturer of gene sequencing and analysis products as a result of infringement of a number of patents. Studied the markets for the patented product, evaluated the substitutability of potentially competing products made by various manufacturers, and valued the patented technology from both parties' perspectives. Constructed and queried a large product database to determine which products infringed which patents-in-suit and the revenues associated with those products.

Provided expert testimony in a patent infringement matter related to antitrust counterclaims in the centralized hospital pharmacy automation systems market. Conducted analyses to determine the relevant product and geographic markets. Evaluated whether the counterparty had market power in the relevant markets. Examined alleged anticompetitive acts to determine the economic impact of these acts. Determined economic damages these anticompetitive acts had on the claimant.

Provided expert testimony in a trademark infringement litigation in the low-bed, heavy haul trailer industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of whether secondary meaning could be attached to the trademark at issue.

Provided expert testimony in a trademark infringement litigation in the clothing fashion industry. Evaluated the market definition methodology used by the opposing expert and determined the appropriate definition of the relevant market. Evaluated the survey methodology used by the counterparty to determine whether there was survey evidence of the likelihood of confusion between the marks. Determined whether survey data were appropriately collected and analyzed to determine the likelihood of confusion. Evaluated whether damages occurred to the defendant due to the likelihood of reverse confusion.

Developed economic analyses to determine the appropriate royalty rate for a compulsory license which would give the infringing party the ability to continue to make and sell medical devices after a jury found infringement. Examined the patented technology's benefits to the infringer and the maximum it would

be willing to pay for its use. Examined the benefits of the patented technology to the infringed party and the minimum it would be willing to accept for its use.

Provided expert testimony in a trademark infringement litigation in the antibiotic ointment industry. Evaluated the survey methodology used by the counterparty to determine whether there was survey evidence that secondary meaning had been established for the trademark. Determined whether survey data were appropriately collected and analyzed to determine secondary meaning. Evaluated the appropriateness of using the survey data collected for the purposes of determining whether dilution to the trademark had occurred.

Developed economic models to determine damages suffered by a manufacturer of outdoor security lighting products as a result of patent infringement. Defined the markets for the patented product and the relevant substitutes for that product. Established the likelihood that lost sales due to the counterparty's infringement of the patent. Determined the value of the patented technology to both parties in generating product sales.

Provided expert testimony in a patent infringement litigation in the handheld mobile computing devices industry for the purposes of a preliminary injunction. Defined the relevant market for the alleged infringing products. Determined the competitive effect that the accused products would have on the counterparty's sales and product prices. Evaluated the likelihood that the plaintiff would be irreparable harmed by the alleged patent infringement. Evaluated the counterparty's opinions as to the effects on its sales and prices of the alleged infringement.

Conducted survey research in a trademark infringement litigation in the student information systems software industry. Designed the survey questionnaire and sampling approach used to collect data. Analyzed data collected from the survey in the context of whether secondary meaning could be attached to the trademark at issue.

Provided expert testimony in a patent infringement litigation in the hydraulic disc bicycle brake industry. Conducted analyses to determine the relevant market. Evaluated claims of lost profits, price erosion, and reasonable royalties. Developed analyses to determine demand for the patented feature of the products as well as economic damages due to patent infringement.

Provided expert testimony in a patent infringement litigation in the medical products industry. Evaluated the product market for the patented product to determine demand for and the value of the patented technology. Determined the costs to design around the infringed technology and determined the impact various other factors would have on the royalty rate that might be negotiated by both parties.

Provided expert testimony in a copyright infringement litigation in the software industry. Determined the relevant market in which the software was used. Developed analyses to determine the foregone profits due to the illegal use of the copyrighted software as well as the unjust enrichment for that use.

Developed economic and survey research analyses to evaluate damages claims associated with alleged violations of the Lanham Act concerning false advertising in clothes dryer industry. Evaluated whether the alleged false advertising had an adverse impact on the sales and prices of the counterparty's clothes dryers. Evaluated whether the alleged false advertising had a favorable impact on the accused party's clothes dryers.

Provided expert testimony in a patent infringement litigation in the farm machinery industry. Oversaw

the sampling and collection of data from the use of the alleged infringing machines as well as non-infringing alternatives. Conducted advanced statistical tests to determine whether various configurations of the farm machinery produced statistically different measures of performance. Evaluated the statistical methodology used by the counterparty's expert.

Provided expert testimony in patent infringement matter in the medical products industry. Studied the markets for the patented product and evaluated the substitutability of potentially competing products made by various manufacturers to determine the relevant market. Developed economic models to value the patented technology from both parties' perspectives in order to determine damages suffered by the plaintiff. Evaluated the opposing expert's damages opinions attributed to the counterparty's alleged infringement.

Conducted industry research and developed economic models to determine the value of a portfolio of patents in the gene sequencing industry. Provided information on the possible ways in which the patents could be monetized to provide value to the client.

Provided expert testimony in a patent infringement litigation in the compact digital camera industry. Evaluated the survey methodology used by the counterparty's expert to determine the value of the patented features in the accused products. Determined whether the survey and sampling design were appropriately constructed. Examined whether the survey data were appropriately collected and analyzed to determine the value of the patented features.

Conducted survey research in a copyright infringement litigation in the outdoor wind sculpture industry. Designed the survey questionnaire and sampling approach used to collect data. Analyzed data collected from the survey to evaluate whether the protected work and the accused work were substantially similar from the viewpoint of an ordinary observer.

Provided expert testimony in a patent infringement investigation in the video analytics software industry. Evaluated the counterparty's claims regarding the economic prong of the domestic industry requirement. Determined the amount of the bond associated with the Presidential review period.

Provided expert testimony in a patent infringement investigation in the vehicle windshield wiper blade industry. Analyzed financial and industry information to evaluate whether a domestic industry had been established by the Complainant. Conducted analyses to evaluate the appropriateness of an exclusion order, cease-and-desist order, and the appropriate amount of the bond associated with the Presidential review period. Evaluated the counterparty's claims regarding the economic prong of the domestic industry requirement.

Conducted survey research in a trademark infringement litigation in the retirement home industry. Designed the survey questionnaire and sampling approach used to collect data. Analyzed data collected from the survey in the context of whether there was the likelihood of confusion between the trademarks at issue.

Developed economic analyses to determine whether there was evidence of commercial success for a pharmaceutical product in its relevant market. Examined the financial information for the pharmaceutical product as well as discounted profitability of the product relative to the investments undertaken to bring the product to market. Evaluated the counterparty's claims regarding commercial success.

Conducted survey research in a trademark infringement litigation in the coffee maker industry.

Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of whether secondary meaning could be attached to the trademark at issue.

Conducted industry research, evaluated economic models, and developed licensing strategy to assist the valuation and licensing of patented technology and trade secrets in the steel-making industry. Provided information on the possible ways in which the technology could be licensed and provided strategic advice on how to set up the licensing agreement.

Developed economic analyses to determine whether there was evidence of commercial success for a pharmaceutical product in its relevant market. Determined the relevant market for the product. Examined the financial information for the pharmaceutical product as well as the market presence of the product. Accounted for relevant macroeconomic, industry, and company-specific factors in examining the pharmaceutical product's performance.

Provided expert testimony in a patent infringement litigation in the commercial bakery tray industry. Conducted analyses to determine the relevant market. Determined economic damages due to lost profits on lost sales, price erosion, and reasonable royalties.

Provided expert testimony in a patent infringement investigation in the smartphone, tablet, and other wireless devices industries. Analyzed the relevant markets to evaluate whether harm to public interest was likely to occur if the Commission was to grant the Complainant an exclusion order. Evaluated the counterparties' claims regarding potential harm to public interest under the proposed exclusion order.

Provided expert testimony in a trademark infringement litigation in the tool industry. Evaluated the survey methodology used by the counterparty to determine whether there was survey evidence of secondary meaning related to the trade dress of the tools. Also evaluated whether there was a likelihood of confusion in the marketplace between the asserted trade dress and the accused trade dress.

Conducted survey research in a trademark and trade dress infringement litigation in the office supplies industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of whether there was a likelihood of confusion in the marketplace between the protected trademark and trade dress and the accused trademark and trade dress.

Provided expert testimony in patent infringement litigations in the software industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of the usage, importance, and purchasing drivers of various software features. Evaluated the counterparty's claims regarding various software features.

Provided expert testimony in a trademark infringement litigation in the vegetable produce industry. Evaluated the survey methodology used by the counterparty to determine whether there was survey evidence of a likelihood of confusion between the asserted trademark and the accused trademark. Determined whether survey data were appropriately collected and analyzed to determine likelihood of confusion.

Conducted survey research in a patent infringement litigation in the smartphone, tablet, MP3 player,

and computer industries. Designed sampling approach, experimental design, and survey instrument used to collect data. Analyzed data collected from the survey in the context of the usage, importance, and willingness to pay for various product features.

Provided expert testimony in a patent infringement litigation in the medical products industry for the purposes of a preliminary injunction. Defined the relevant market for the alleged infringing products. Determined the competitive effect that the accused products would have on the counterparty's sales and product prices. Evaluated potential damages claims and the defendant's ability to pay these claims. Evaluated the likelihood that the plaintiff would be irreparably harmed by the alleged patent infringement. Evaluated the counterparty's opinions as to the effects on its sales and prices of the alleged infringement.

Provided expert testimony in a patent infringement litigation in the smartphone industry. Evaluated the survey methodology used by the counterparty to determine the usage of, importance of, and willingness to pay for the alleged patented smartphone features.

Conducted survey research and econometric analyses in a patent infringement litigation in the digital content management industry. Evaluated the counterparty's survey research in the context of the willingness to pay for various product features.

Provided expert testimony in a patent infringement arbitration in the smartphone industry. Conducted economic analyses to determine the appropriate balancing royalty payment for a cross license to each party's respective patent portfolios, which included patents, divested patents, and standard essential patents. Evaluated the counterparty's opinions as to balancing royalty payment.

Conducted survey research in a trade dress matter in the clothing industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of whether there was secondary meaning associated with the asserted trade dress.

Conducted survey research in a trade dress matter in the baked goods industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of whether there was likelihood of confusion between the asserted trade dress and the allegedly infringing trade dress.

Provided expert testimony in patent infringement matter in the automotive industry. Evaluated the markets for the patented product as well as licensing practices in the industry. Developed economic models to value the patented technology from both parties' perspectives in order to determine damages suffered by the plaintiff. Evaluated the opposing expert's damages opinions attributed to the counterparty's alleged infringement.

Provided expert testimony in a patent infringement litigation in the disposable training pants industry. Evaluated the counterparty's survey research in the context of the usage, importance, and willingness to pay for various product features. Evaluated the counterparty's damages claim as it related to the use of the counterparty's survey evidence.

Provided expert testimony in a Lanham Act matter concerning false advertising in the mattress industry. Developed financial and econometric models to determine to what extent, if any, the alleged false advertising had on the plaintiff's sales and profits. Incorporated these models into a determination of the appropriate damages due to the alleged false advertising.

Provided expert testimony in a trademark infringement investigation in the shoe industry. Evaluated the survey methodology used by the counterparty to determine whether there was a likelihood of confusion in the marketplace between the asserted trade dress and the accused trade dress.

Provided expert testimony in a patent infringement litigation in the server software industry. Evaluated the counterparty's survey research in the context of the usage of various product features. Evaluated the counterparty's damages claim as it related to the use of the counterparty's survey evidence to apportion the royalty base and set the royalty rate.

Provided expert testimony in a patent infringement litigation in the camera industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of the usage and relative importance of various camera features. Evaluated the counterparty's claims regarding various software features.

Conducted survey research and developed economic analyses to evaluate claims associated with alleged false advertising in food industry. Evaluated whether the alleged false advertising had an adverse impact on the demand for the relevant food product.

Provided expert testimony in a trademark infringement investigation in the digital media content software industry. Evaluated the survey methodology used by the counterparty to determine whether there was a likelihood of confusion in the marketplace between the asserted trade dress and the accused trade dress.

Conducted survey research to evaluate claims associated with alleged false advertising in healthcare industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey to determine whether there was an impact to the false advertising.

Provided expert testimony in a patent infringement litigation in the telematics devices industry. Designed sampling approach and survey instrument used to collect data. Analyzed data collected from the survey in the context of the usage and relative importance of various telematics devices features.

Provided expert testimony in a trademark infringement litigation in the consumer lighting products industry. Conducted survey research to determine whether there was a likelihood of confusion in the marketplace between the asserted trademarks and trade dress and the accused trademarks and trade dress.

Provided expert testimony in a false advertising litigation in the pharmaceutical industry. Conducted econometric analyses that were used to determine whether the plaintiff incurred damages due to the alleged false advertising. Evaluated the counterparty's counterclaims regarding false advertising damages.

Provided expert testimony in a patent infringement matter in the automobile industry. Determined the value that could be associated with the alleged use of the patented technology in one component of a multicomponent product and the damages associated with that alleged use. Evaluated the counterparty's damages claims regarding patent infringement damages.

Provided expert testimony in a trademark infringement litigation in the video and audio editing software

industry. Evaluated the survey methodology used by the counterparty to determine whether there was a likelihood of confusion in the marketplace between the asserted trademark and trade dress and the accused trademark and trade dress.

Provided expert testimony in multiple litigation related to alleged misrepresentations made in violation of the Lanham Act in the security services industry. Evaluated the surveys conducted by the counterparty's survey expert regarding the impact of the alleged misrepresentations on current consumers' decisions of which security services to retain. Evaluated counterparty's damages claims and methodology regarding the number of customers lost due to the alleged misrepresentations and the value of those customers' accounts.

Provided expert testimony in a patent infringement litigation in the home video game industry. Evaluated the counterparty's survey research in the context of the usage and value of various product features. Evaluated the counterparty's damages claim as it related to the use of the counterparty's survey evidence to apportion the royalty base and set the royalty rate.

Provided expert testimony in multiple patent infringement litigation dealing with an Abbreviated New Drug Application. Developed economic analyses to determine whether there was evidence of commercial success for a pharmaceutical product in its relevant market. Determined the relevant market for the product. Examined the financial information for the pharmaceutical product as well as the market presence of the product. Accounted for relevant macroeconomic, industry, and company-specific factors in examining the pharmaceutical product's performance.

Provided expert testimony in a trademark and copyright litigation in the entertainment industry. Conducted analyses to determine the value of the asserted intellectual property and the likely structure of a hypothetical license. Evaluated the counterparty's claims regarding trademark and copyright damages.

Provided expert testimony in a trademark infringement litigation in the automotive tire industry. Conducted survey research to determine whether there was secondary meaning associated with the asserted trade dress as well as whether there was a likelihood of confusion in the marketplace between the asserted trade dress and the accused trade dress.

Provided expert testimony in a trademark infringement litigation in the sporting goods industry. Conducted survey research to determine whether there was a likelihood of confusion in the marketplace between the asserted trademark and the accused trademark.

Provided expert testimony in a copyright royalty matter involving the distribution of a royalty pool amongst various claimants. Conducted economic analyses to determine the appropriate methodology to employ to allocate royalty payments to the claimants.

Antitrust

Developed economic analyses addressing liability and damage issues in a litigation involving claims of Robinson-Patman antitrust violations. Analyzed the economic impact of alleged price discrimination on the sales of the plaintiff using a very large database of sales transactions on a weekly basis for every cigarette retailer in the continental U.S. over a seven-year period. Developed sophisticated econometric models to quantify the amount of the economic impact. Reviewed financial and sales

records to assess the impact on profits of alleged lost sales due to pricing decisions based on the higher costs.

Prepared economics analyses pertaining to the market structure, conduct, and performance for the rapid prototyping machine market. Conducted an economic analysis to determine the appropriate antitrust market. Determined the amount of market power that certain market participants had in the marketplace. Determined the effects to competition in the defined market of anticompetitive acts committed by the counterparty.

Provided expert testimony relating to the processed sugar industry which addressed whether events in that industry could have led to lost business opportunities for a firm in that industry. Conducted economic analyses to determine the appropriate market for the products at issue. Examined events in the industry and conducted industry research to determine the effects of industry events on business opportunities for that firm.

Developed economic analyses and conducted economic research to determine whether a large semiconductor manufacturer had a position of dominance in the relevant market for microprocessors. Analyzed the demand-side and supply-side substitution possibilities in the context of the determination of the relevant market. Analyzed innovation and competition in the industry to address the issue of dominance.

Developed analyses to address issues of class certification in a litigation dealing with claims of anticompetitive conduct in the wooden pallet industry. Addressed plaintiffs' proposed survey research, used to estimate damages, by examining their survey methodology using a total survey error approach.

Developed economic and econometric analyses and conducted economic research to determine whether collusive behavior took place among a group of large manufacturers against a class of downstream customers in the containerboard market. Analyzed the economics underlying the business and financial decision made in the operations of the manufacturing business.

Conducted survey research to determine what products and services are likely part of the relevant market for the purposes of determining substitutes for the products and services of two firms intending to merge their businesses into one firm.

General Consulting and Litigation

Evaluated the damages suffered by a domestic manufacturer of orthopedic products as a result of a breach of best efforts clause by one of its foreign distributors. Reviewed financial and market data to gauge the performance of the distributor. Determined the revenues and profits lost by the manufacturer due to the distributor's failure to use its best efforts. Included an analysis of the value of returned inventory by the distributor to the manufacturer.

Evaluated the damages suffered by a domestic manufacturer of orthopedic products as a result of a breach of its contract with one of its domestic distributors. Reviewed financial and market data to gauge the performance of the distributor. Evaluated the use of mortality tables in the context of the plaintiff's expert report. Developed sophisticated NPV models that determined the revenues and profits lost by the distributor due to the breach of contract.

Provided consulting expertise to assist a large data collection and media ratings company in best practices improvements regarding its telephone survey operations. Conducted research into its

current methods for conducting telephone surveys, including analyses of large databases of calling records and outcomes. Developed multivariate statistical models to better forecast calling outcomes and researched improved calling rules to enhance performance.

Provided expert testimony in a breach of contract litigation in which economic analyses were used to determine the loss of members and members' purchases suffered by a large hardware cooperative due to the breach of contract by a large accounting firm. Using large data sets provided by the coop, developed econometric analyses that gauged the economic impact of a large financial loss suffered by the cooperative due to the breach of contract while accounting for unrelated events surrounding the announcement of the loss.

Provided expert testimony in a breach of contract litigation related to software usage and the payment of royalties. Developed analyses that determined the number of licenses for which a software company was not paid a royalty for the use of the licenses. Evaluated the survey data and survey methodology used by the counterparty to determine the extent to which an embedded software program included in a larger software package was invoked.

Provided expert testimony in a breach of contract litigation related to product failure and the loss of business in the auto parts industry. Developed economic analyses to define properly the relevant market, estimate market size, and determine other factors that impacted the plaintiff's business. Evaluated the counterparty's use of product diffusion models to quantify damages due to lost business.

Provided consulting expertise to assist a large data collection and media ratings company in best practices improvements regarding its telephone survey operations. Conducted research of large databases of calling records and outcomes. Developed cost analyses to identify the direct and indirect costs of certain outcomes. Recommended alternative data collection methods and other best practices suggestions to minimize the costs of undesirable outcomes without compromising data quality.

Developed economic analyses to determine damages resulting from a breach of a license agreement between companies in the flat screen television industry. Evaluated counterparty's damages claims of foregone royalties and loss of enterprise value due to the breach.

Provided expert testimony in a litigation related to violations of ballot secrecy in the election of union officials. Developed statistical models to examine voting patterns and voter turnout from the contested elections to evaluate claims that the violation of ballot secrecy impacted election results. Evaluated counterparty's vote reallocation models to determine their reasonableness.

Evaluated the survey conducted by the counterparty's survey expert regarding the product characteristics and specifications that were factors in consumers' purchasing decisions of large, high-end computer servers. Conducted analyses of survey data to determine the importance of certain purchase drivers in the context of consumers' overall decision-making process.

Developed a multi-stage stratified sampling design used to draw samples from a large wholesaler of precious stones for the purposes of valuing the wholesaler's precious stones inventory. Derived formulae for the sample estimates and variances of the sample estimates. Consulted on appropriate sample sizes to obtain desired level of precision for the sample estimates. Programmed the sample design and calculation of sample estimates and variances using statistical software.

Developed economic analyses using multiple, large databases to evaluate competitive relationships between certain trade shows in the trade show industry. Determined whether certain trade shows

detracted from the commercial success of other trade shows. Developed a survey and sampling methodology to collect relevant economic data. Developed approaches to determine the amount and degree of competitive overlap across various trade shows.

Provided expert testimony in a litigation related to the alleged devaluation of class members' Rewards points due to a change in the customer rewards program. Developed analyses to quantify the economic impact of the program change on class members' points. Evaluated the counterparty's damages claims of economic harm due to the breach of the program agreement.

Provided expert testimony in a litigation related to product liability in an automobile accident. Determined the diminished earning capacity of the injured party using economic and financial models to gauge potential lost earnings and benefits. Evaluated counterparty's damages claims and methodology to determine their reasonableness.

Developed economic analyses based on proprietary data, third-party research, and survey data to determine the amount of economic damages attributable to a larger product failure and product recall in the refrigerator industry. Evaluated the counterparty's analyses and damages claims of the economic harm due to the product failure and recall.

Conducted survey research to evaluate movie theater attendance patterns, reasons for going to movie theaters, the relative importance of these reasons in attending movies, and pricing information for movie theater products. Designed the survey questionnaire and sampling approach. Oversaw the data collection of both internet and in-person surveys. Conducted various statistical survey analyses.

Provided expert testimony in a litigation related to an alleged breach of contract in the commercial parking garage industry. Using advanced statistical models, determined the amount of lost garage parkers due to the alleged breach of contract. Evaluated counterparty's lost garage parker claims and methodology to determine their reasonableness.

Evaluated the survey conducted by a large survey research firm regarding farming methods and subsistence in third world countries in the context of a professional malpractice claim. Conducted analyses of survey methodology and survey data to determine whether the survey conformed to survey best practices and whether the survey likely suffered from bias.

Provided expert testimony in a product liability litigation in the fruit industry. Developed a multi-stage stratified sampling design used to select at random samples of fruit trees from the target population. Oversaw and led the collection of samples to be used by technical experts in their analyses. Derived formulae for the sample estimates and variances of the sample estimates. Consulted on appropriate sample sizes to obtain desired level of precision for the sample estimates.

Finance

Reverse engineered and analyzed an expert's 10(b)-5 damages model surrounding the quantification of financial losses by a class of the company's shareholders. Proposed possible adjustments to the model that would provide a more reliable estimate of damages. Developed a large database and modeled daily stock prices and trader activity for a five-year period.

Conducted financial analyses of a trader's trading activity where it was alleged the trader late traded into and out of various mutual funds over approximately a three-year period. Constructed a large data base of every S&P futures transaction for approximately a six-year period and a large database of all of the trader's trades. Analyzed the trading activity of the trader using these databases. Developed

econometric models based on this analysis to determine to what extent, if any, the trader late traded. Evaluated the econometric models provide by the counterparty alleging late trading.

Conducted and consulted on analyses of traders' and mutual employees trading activities in which simulation of trading activity was done following pre-specified trading rules to determine the total next-day net NAV return and the amount of dilution for trading within a given mutual fund. Analyzed and consulted on the comparison of simulation based on these pre-specified trading rules to litigants' trading activities as well as to baseline simulations where next-day net NAV return and the amount of dilution was determined from trading done on randomly determined trade days.

Provided expert testimony in a malpractice litigation concerning issues related to a company's reorganization of its debts. Conducted and evaluated various analyses, including event studies, to determine the effect information in the proxy statement for a bond offering, as well as other information available at that time, had on the litigant's bond prices.

Provided expert testimony in a bankruptcy litigation involving the valuation of PCS licenses in the wireless telephone industry. Evaluated econometric models used to value the PCS licenses by the counterparty's expert. Examined factors that impacted license value and determined appropriateness of the valuation models.

Conducted economic analyses to determine the likelihood of lending discrimination by a large finance company in the market for consumer automobile loans. Examined and developed large databases that included financing transactions between the large lender and individual borrowers. Developed sophisticated econometric models to determine whether evidence suggested lending decisions were made on the basis of inappropriate consumer characteristics.

Conducted economic analyses of various reasons for the magnitude and change in personal bankruptcy filings used for credit risk management and marketing analytics in the credit card industry. Developed statistical models based on various economic variables to explain and forecast personal bankruptcy filings. Developed forecasts of underlying primitive variables in the overall forecasting models.

Conducted survey research in a litigation in the private equity fund industry. Designed the survey questionnaire and sampling approach used to collect data. Analyzed data collected from the survey to examine investors' decision-making processes and which characteristics of private equity funds influence investors' decisions.

Evaluated the financial models developed by the counterparty's expert to value nuclear power plants and the potential synergies realized by fleet management of nuclear power plants.

- 4 Partial

[SINTRO]: Thank you for your interest in participating in this study. If you normally wear eyeglasses or contact lenses when you read, please make sure they are on when you take this survey. Your answers to these survey questions are extremely important. Please take your time to understand each question and provide the response that represents your best answer. Also, please answer these survey questions on your own – do not ask for help from anyone else to answer any of the survey questions. Do not refer to any reference materials or access the Internet to help you answer any of these survey questions. If you don't know or are unsure about an answer to any question, just indicate this by choosing the DON'T KNOW/UNSURE option. Your identity will be kept strictly confidential. Please select one of the following responses:

Values: 1-2

- 1 I understand and agree to follow these instructions as I take this survey.
- 2 I do not understand or do not agree to follow these instructions as I take this survey.

[SQ1]:

Values: 1-5

Are you using a desktop computer, laptop computer, tablet computer, smartphone, or some other type of electronic device to complete this survey?

- 1 Desktop computer
- 2 Laptop computer
- 3 Tablet computer
- 4 Smartphone
- 5 Other electronic device

[FLAG1]:

Values: 1-2

SET FLAG1 = 1 IF SQ1 ANSWER IS INCONSISTENT WITH YOUR DETECTION OF THE TYPE OF DEVICE ON WHICH THE RESPONDENT IS TAKING THE SURVEY

- 1 True
- 2 False

Comments about Relaxed Fit; Commute Time - Knitastic

I'm retired & with that comes less stress on my joints. Easy to put on & cushioning with rubber soles. Not pleats & high arch support. I don't like no holes shoes either but I thought I'd give it a try since the store didn't usually carry a large selection & my size is common & looked like I'd never happy with my purchase & will be wearing more. I'm looking forward to seeing the Spring Collection of colors for slip on shoes.

 I recently had surgery for an Achilles tendon rupture, and my heel is still tender. Is the lip of heel on the shoe low enough that it won't rub my heel?

[Answer by Mary 3 months ago](#)

 [Verified Buyer](#) [Report Abuse](#)

✓ Verified Reply - TimTheShoeGuy

The Commute Time Knitastic shoe has a lower heel that should not touch your Achilles, and it's also well padded at the heel area.

🔍 Will these shoes accommodate wide feet?

asked by Snikkyalred 1 year ago

✓ Verified Reply - TimTheShoeGuy

The Commute Time shoes are part of the Relaxed Fit collection, meaning they have a roomy comfortable fit in the toe and forefoot, and should feel like a women's C width fit, that's great! If you wear a true wide in your narrowest foot, look at the shoes currently available in the Wide Fit designation.

Sizing Fits too Small

Comfort  Low

Wanted to love...;

Feb 02, 2020

Had high hopes but these didn't work for me. Super cute, but the size wasn't a fit: the width is fairly straight and wide, the length probably true to size but I'm between an 11 and 12 and these 11s (the largest available) were too short. Sizing up (if it were an option) probably wouldn't have helped because then the width would've been too wide. Soles seemed pretty rigid but I didn't have a chance to walk in them enough to verify. Very well made.

Merrell's reply
 We appreciate your feedback. Thank you!

**GWENDOLIS**

From Washington, DC
Product Usage: NA

Sizing: Fits too small

Half size too small

Jan 16, 2020

Overall, I liked this product, but for me it ran a half size too small. I'm a fairly consistent size 9 and my heel rubbed the back of the shoe making it unwearable. I should have ordered a 9 1/2, but unfortunately I wore the shoes and can't return them. I'll be donating to a friend with a 9 1/2 shoe size.

COMFORTABLE, FITS WELL, LOOKS GREAT

I think I'm on my 7th pair? I use to get sharp pains in my feet in shoes. I can wear these for hours without issue.

They are very comfortable to wear, and work with both dress pants, jeans, or dresses.

My only "complaint" is they have been running out of my size - 10 - lately!

Please Clarks, don't stop selling these.

Extremely comfortable!

I bought a black and navy pair and found them very comfortable. I usually wear a size 9 and that's what I ordered but if I planned on wearing them with heavy socks I would order the next size.

Good, But prefer Earlier Version

I bought this shoe to replace the earlier style Cloudsteppers mule which has become my house slipper and was wearing out. Siilian free is comfortable and I like the insert which is removable for washing. I do like the earlier style better because there is a velcro adjustment across the instep. This adjustment is one of the reasons I buy Car's shoes. The Siilian is a bit loose and I would prefer to have a true mule, without a partial back.

I love Clark's shoes!

I love Clark's shoes! I can take them out of the box and put them on and walk for hours in them! These are great for my work shoes as I run around a busy medical office

Good looking and easy to get into

I have a part time job where I am on my feet alot. These shoes give my feet good support and are soooo comfortable! My feet don't bother me at all when my work day is over. Plus, they are good looking for a work shoe and so easy to get on and off.

The screenshot shows a web browser window with a survey from Dynata. The URL is survey-dynata.com/survey/selfserve/53b/20031324#. The survey title is "Survey".

Review 1: 5 stars, titled "I would buy again". The reviewer is Evie, from Pennsylvania, a casual buyer, and a verified buyer. The review was submitted 3 months ago. The text of the review is: "I'm retired & with that comes bad knees so I look for easy to put on & cushioning with rubber soles not plastic & high arch support, I don't like to order shoes online but I thought I'd give it a try since the stores don't usually carry a large selection & my size is common & sell out fast. I am very happy with my purchase & will be ordering more. I'm looking forward to seeing the spring collection of colors for slip on mules." The bottom line is "Yes, I would recommend to a friend." The review was helpful to 1 person.

Review 2: 5 stars, titled "Just what I ordered". The reviewer is Karen, from Three Rivers, CA, a casual buyer, and a verified buyer. The review was submitted 3 months ago. The text of the review is: "I already own the same full shoe, but wanted a half shoe (slip on)." The bottom line is "Yes, I would recommend to a friend." The review was helpful to 0 people.

Q&A Section: The section is titled "Q&A" and has a search bar. The search bar contains the text "Search for answers to your question". The search bar also has a "Search for..." input field and a search button. The section shows 5 out of 7 questions. The first question is: "I recently had surgery for an Achilles tendon rupture, and my heel is still tender. Is the lip of heel on the shoe low enough that it won't rub my heel?" It was asked by Nina 2 months ago. The answer is: "The Commute Time Knitastic shoe has a lower heel that should not touch your achilles, and it's also well padded at the heel area." It was answered by TimTheShoeGuy, a verified buyer. The answer was helpful to 0 people.

Q Will these shoes accommodate wide feet?

Asked by Snorkysfeet 1 year ago

Verified Reply - Tim the Shoe Guy

The Commute Time shoes are part of the Relaxed Fit collection, meaning they have a roomy comfortable fit at the toe and forefoot, and should feel like a women's C width for that area. If you wear a true wide fit you may want to look at the shoes currently available in the Wide Fit designation.

survey-d.dynata.com/survey/selfserve/53b/20031324#;

I'm retired & with that comes bad knees so I look for easy to put on & cushioning with rubber soles not plastic & high arch support, I don't like to order shoes online but I thought I'd give it a try since the stores don't usually carry a large selection & my size is common & sell out fast. I am very happy with my purchase & will be ordering more..I'm looking forward to seeing the spring collection of colors for slip on mules...

Q I recently had surgery for an Achilles tendon rupture, and my heel is still tender. Is the lip of heel on the shoe low enough that it won't rub my heel?

Asked by Nina 2 months ago

Verified Reply - TimTheShoeGuy

The Knitastic shoe has a lower heel that should not touch your achilles, and it's also well padded at the heel area.

The screenshot shows a web browser window with the URL `survey-d.dynata.com/survey/selfserve/53b/20031324#;`. The page displays a survey with three questions and verified replies from a user named 'TimTheShoeGuy'.

Question 1: Is the insole removeable
Asked by Deb 10 months ago

Verified Reply - TimTheShoeGuy:
The Knitastic shoe comes with the Air Cooled Memory Foam insole, which is lightly secured in place but should be able to be carefully removed if needed.

Question 2: Is the insole removable on the womens Knitastic shoe
Asked by Vicki 1 year ago

Verified Reply - Tim the Shoe Guy:
The Air Cooled Memory Foam insole is lightly secured in place but should be able to be removed carefully for use with an orthotic.

Question 3: Will these shoes accommodate wide feet?
Asked by Snorkysfeet 1 year ago

Verified Reply - Tim the Shoe Guy:
The Knitastic shoes are part of the Relaxed Fit collection, meaning they have a roomy comfortable fit at the toe and forefoot, and should feel like a women's C width for that area. If you wear a true wide fit you may want to look at the shoes currently available in the Wide Fit designation.

 Sizing Fits too Small
 Comfort [Progress bar: 1/5]
 Wanted to love...
 Feb 02, 2020
 Had high hopes but these didn't work for me. Super cute, but the size wasn't a fit: the width is fairly straight and wide, the length probably true to size but I'm between an 11 and 12 and these 11s (the largest available) were too short. Sizing up (if it were an option) probably wouldn't have helped because then the width would've been too wide. Soles seemed pretty rigid but I didn't have a chance to walk in them enough to verify. Very well made...
 Merrell's reply: We appreciate your feedback. Thank you!

So Comfortable!

I made this purchase for my mother. She wanted to give it a try since she's on her feet at work all day. [Show Full Review](#)

COMFORTABLE, FITS WELL, LOOKS GREAT

I think I'm on my 7th pair? I use to get sharp pains in my feet in shoes. I can wear these for hours without issue.

They are very comfortable to wear, and work with both dress pants, jeans, or dresses.

My only "complaint" is they have been running out of my size - 10 - lately!

Please Clarks, don't stop selling these.

Extremely comfortable!

I bought a black and navy pair and found them very comfortable. I usually wear a size 9 and that's what I ordered but if I planned on wearing them with heavy socks I would order the next size.

Good, But prefer Earlier Version

I bought this shoe to replace the earlier style Cloudsteppers mule which has become my house slipper and was wearing out. Silian free is comfortable and I like the insert which is removable for washing. I do like the earlier style better because there is a velcro adjustment across the instep. This adjustment is one of the reasons I buy Car's shoes. The Silian is a bit loose and I would prefer to have a true mule, without a partial back.

Good looking and easy to get into

I have a part time job where I am on my feet alot. These shoes give my feet good support and are soooo comfortable! My feet don't bother me at all when my work day is over. Plus, they are good looking for a work shoe and so easy to get on and off.

Exhibit 20

SINTRO

The screenshot shows a web browser window with a single tab titled "Survey". The address bar displays the URL "survey-d.dynata.com/survey/selfserve/53b/20031325#?". The page content includes a progress bar at the top right showing "0%". A green banner at the top of the survey area says "Please [login](#) to see additional testing features". Below this, the text reads: "Thank you for your interest in participating in this study. If you normally wear eyeglasses or contact lenses when you read, please make sure they are on when you take this survey." This is followed by a paragraph: "Your answers to these survey questions are extremely important. Please take your time to understand each question and provide the response that represents your best answer. Also, please answer these survey questions on your own – do not ask for help from anyone else to answer any of the survey questions. Do not refer to any reference materials or access the Internet to help you answer any of these survey questions." Another paragraph states: "If you don't know or are unsure about an answer to any question, just indicate this by choosing the DON'T KNOW/UNSURE option." Below that, it says: "Your identity will be kept strictly confidential." The next section is titled "Please select one of the following responses:" and includes the instruction "Select one". There are two radio button options: "I understand and agree to follow these instructions as I take this survey." and "I do not understand or do not agree to follow these instructions as I take this survey." A yellow "Continue" button with a right arrow is located at the bottom right of the survey area.
